SECTION 1

Overview

Elev8 Comply turns a Cal/OSHA elevator notice into finished, documented work: it reads the notice, drafts the proposal, gets the client's approval and date, dispatches a technician, and fills in the official state forms. It runs in any web browser at **www.elev8comply.com** — on a computer, tablet or phone.

Who uses it

Role	Who they are	Their main job in the app
Admin	Office owner / manager	Everything, plus users, properties and settings
Reviewer	Estimator / compliance reviewer	Checks parsed notices and AI-drafted proposals, sends proposals to clients
Dispatcher	Scheduler	Confirms dates, creates work orders, assigns and dispatches technicians, generates forms, tracks 48-hour notices
Technician	Field mechanic	Sees assigned work orders and updates status from the field
Client	Property manager / building owner	Uploads notices, approves proposals, requests work dates, follows job progress

How work flows

How a job moves from notice to filed paperwork

Everything before the client's approval is office work on the proposal; everything after is scheduling, the field visit and the state paperwork.

1. **Notice in.** A Cal/OSHA order (Order to Comply / preliminary order) arrives as a PDF: uploaded by staff, uploaded by the client, or forwarded by email.
2. **AI reads it.** The app extracts the property, State No., deadline, violations, required tests, urgency and whether a 48-hour advance notice is needed. A job is created and assigned to a reviewer.
3. **Proposal drafted.** The AI writes a draft proposal (letter and priced line items). The reviewer gets an email, checks and edits it, and clicks **Send to Client**.
4. **Client decides.** The client approves, requests changes, or declines in the client portal.
5. **Date set.** After approving, the client requests up to three preferred dates. The dispatcher confirms one and the client is emailed.
6. **Work order and dispatch.** The dispatcher creates a work order, finds and assigns a technician, and dispatches the job. The technician gets an email with the dispatch packet (and a text if they opted in to SMS).
7. **48-hour notice.** Before an annual or five-year test the state may witness, the Cal/OSHA district office needs 48 hours' notice (form EU-787). The app tracks that deadline, warns staff, and holds the work order if the notice is late.
8. **In the field.** The technician marks the work order Ready, En Route, On Site, and Complete.

9. **Paperwork.** The dispatcher generates the official Cal/OSHA forms (EU-632, DOSH-100, EU-787 and others), filled in with job, technician and company details.

> **Job stages you will see:** Notice Received → Proposal Drafted → Proposal Sent → Approved → Scheduled → Dispatched. A job goes to **Under Review** if the client requests changes or declines. All dates and times in the app are California (Pacific) time.

SECTION 2

Getting Started

Everyone gets into Elev8 Comply the same way: an administrator adds you, you get an invite email, and you set your own password. You never need to share a password with anyone.

Your invite email

1. Look for an email from **Elev8 Comply <no-reply@elev8comply.com>** with the subject *You're invited to Elev8 Comply*. Check spam if it isn't there after a few minutes.
2. Click **Accept Invitation & Set Password**.
3. On the page that opens, click **Continue**. (This extra click protects the link from company email scanners, which open links automatically and would otherwise use it up.)
4. Choose a password of at least 8 characters, type it twice, and click **Update Password**. You land in the app, already signed in.

The link works once. If it has expired or was already used, ask your administrator to click **Resend invite** on your user page.

Signing in

- Go to **www.elev8comply.com/login**, enter your email and password, and click **Sign In**.
- After sign-in, each role lands on its home page: admin and reviewer on **Dashboard**, dispatcher on **Jobs**, technician on **My Work**, client on the **client portal**.
- Do not reply to any email from Elev8 Comply. Replies are not read. Every email has a button that takes you to the right page.

Forgot your password

1. On the sign-in page, click **Forgot password?**
2. Enter your email and click **Send Reset Link**. The page always says "If that email has an account, we've sent it a password reset link" — it never reveals who has an account.
3. Open the email *Reset your Elev8 Comply password*, click **Reset Password**, then **Continue**, and choose a new password.

You can request one reset email per minute. A deactivated account gets no email.

My Account (staff) and Profile (clients)

Staff open **My Account** at the bottom of the left menu. Clients open **Profile** in the client portal menu. Both pages have the same sections:

Section	What you can change	Notes
Profile	Full name, phone	Click **Save Profile**. Your name updates everywhere, including technician records.
Sign-in Email	The email you sign in with	Enter the new address and click **Send Confirmation Link**. Nothing changes until you click **Confirm New Email** in the email sent to the new address. The old address gets a warning email. The link lasts 24 hours.
License Numbers (technicians only)	CCCM License #, QEI Number	Your CCCM number fills in on Cal/OSHA forms for jobs you're assigned to. Leave QEI blank if you aren't QEI certified.
Password	New password	At least 8 characters, typed twice. Click **Change Password**.
SMS Notifications	Opt in or out of text messages	Texts go only to people who opt in, at the number they enter here. Technicians get texts about assigned and dispatched work; admins and dispatchers get 48-hour notice alerts. Clients currently get email only. Reply STOP to any text to stop texts.

Your role (admin, reviewer, dispatcher, technician, client) can only be changed by an administrator.

SECTION 3

Admin Guide

Admins see the whole menu: **Dashboard, Notices, Jobs, Dispatch, Work Orders, Documents, Properties, Settings, My Account**. Admins can do everything a reviewer and dispatcher can (sections 4 and 5), plus the tasks below.

Dashboard

Four counters (**Active Jobs, Critical, Proposals to Review, Overdue Actions**), the job pipeline by stage, and the latest notices and jobs. **New Notice** starts an upload.

Add a notice yourself

1. **Notices → New Notice.**
2. Pick the **Account**, optionally the **Property**, attach the PDF, and click **Register Notice**.
3. Click **Parse with AI**. In under a minute the notice shows its parsed details, a job is created, and an AI proposal draft is ready.

On a notice's page: **View PDF** opens the original; **Mark Reviewed** records that a person checked the parsed details. Only use **Re-Parse** if parsing failed or came out wrong — each re-parse creates another job and draft.

Properties and client accounts

Properties holds each client company (account) and its buildings.

- **Add New Account**: company name, email, phone, address. The account **email** is where proposal emails go, so keep it current.
- **Add Property**: name, address, building type, elevator count. The pencil icon edits.
- **Import CSV**: download the template, fill it in, upload. Accounts are matched by name and must already exist.
- **Delete** a property only if it has no notices or jobs; deleting is immediate and is not blocked.

People and settings

Adding, editing and deactivating users, technician license numbers, and Cal/OSHA form templates are covered in section 8.

SECTION 4

Reviewer Guide

Reviewers see **Dashboard, Notices, Jobs, My Account**. Your job: check what the AI read from each notice and get a correct proposal to the client.

When a new notice comes in

You get an email **[URGENCY] AI Proposal Ready — property** with a link to the draft. Critical notices go to an admin instead of a reviewer.

1. Open **Notices** and click the notice. Compare the parsed panels — **Property & Equipment, Key Compliance Requirements, Action Plan, Violation Items** — against the PDF (**View PDF**).
2. If the parse is right, click **Mark Reviewed**. If it failed (status **Parse Failed**) or is badly wrong, click **Re-Parse** once.
3. Watch the job's risk flags: **missing info**, **low parse confidence** and **critical urgency** mean the AI was unsure — check those fields by hand.

Review and send the proposal

1. **Jobs** shows a banner **AI Proposals Awaiting Review**. Open the job and click **Review & Send** → (or open the proposal from the job's Proposals list).
2. Edit the **Proposal Title**, **Proposal Letter** and **Line Items** (description, quantity, unit price). **Add Line** adds a row; the total recalculates. **Draft with AI** rewrites the draft.
3. Click **Save Proposal**, then **Send to Client**. The client company's email (set on the account in **Properties**) gets **Proposal Ready for Review** with a button straight to the proposal.

No AI draft? On the job, click **New Proposal**, then **Draft with AI** or type it yourself, and **Create Proposal**.

When the client answers

Client action	What happens	What you do
Approve Proposal	Job becomes **Approved**; client is asked to pick dates	Nothing — the dispatcher takes over
Request Changes (with a note)	Proposal becomes **Revision Requested**; job goes to **Under Review**; you get a **Revision Requested** email	Open the proposal, read the **revision notes**, edit, **Save Proposal**, **Send to Client** again
Decline	Proposal **Rejected**; job **Under Review**; staff get **Proposal Declined**	Contact the client by phone

The **Jobs** page banner **Client Requested Changes** lists every job waiting on you.

> Proposals show an expiry date 30 days after sending; it turns red when passed, but the client can still approve — follow up by phone on old ones.

SECTION 5

Dispatcher Guide

Dispatchers see **Notices, Jobs, Dispatch, Work Orders, Documents, My Account** and land on **Jobs** after sign-in. Your job: turn approved jobs into scheduled, dispatched work with the paperwork done.

The Dispatch page: your to-do list

Section	What it lists	What you do
Action Plans Pending Dispatch Review	Parsed notices waiting to become work orders	**Review & Approve**
48-Hour Notices Requiring Action	Work orders whose 48-hour notice is due within 48 hours or overdue	Send the notice, then **Mark Notice as Sent**
Scheduling Confirmation Needed	Client date requests waiting for you	Open and confirm a date
Active Work Orders	Everything in progress	Open to assign, dispatch or hold

Approve Action Plan & Create Work Order marks the notice reviewed and takes you straight to a new work order for that job.

Confirm a work date

You get a **New Scheduling Request** email when a client picks dates.

1. Open it from **Dispatch** → **Scheduling Confirmation Needed**.
2. Read the client's preferred dates and notes. Enter **Confirmed Start**, **Confirmed End** (Pacific time), any access notes and compliance notes.
3. Click **Confirm Date & Notify Client**. The client gets **Work Date Confirmed** with your company phone for changes.

To change a confirmed date, call the client and agree a new one; the app has no reschedule button yet.

Create a work order

1. Open the job and click **Create Work Order**.
2. Check **Scheduled Start / End** (filled from the confirmed date), choose **Region** and **Required Skill**, switch on **48-Hour Advance Notice Required** if the work includes a state-witnessed annual or five-year test, and add **Dispatch Notes**.

3. Click **Create Work Order**. It starts as **Draft** with a dispatch packet, and the job moves to **Dispatched**.

Assign and dispatch a technician

1. On the work order, click **Find Technicians**. Each technician gets a match score (skill + region + availability); 4 or more is marked **Best match**.
2. Click **Assign** on the right person. The work order becomes **Assigned** and the technician gets a text if they opted in to SMS.
3. When ready, click **Dispatch to Technician**. They get an email (plus a text if they opted in to SMS) **Dispatch: date — property** with the full packet.

Dispatch is blocked while a required 48-hour notice is overdue. **Hold** pauses a work order that is Assigned, Dispatched, Ready or En Route; **Release Hold** puts it back to Assigned (or Draft if no technician is assigned).

The 48-hour advance notice

Before an annual or five-year test that the state may witness, the Cal/OSHA district office expects at least 48 hours' notice, given on form EU-787 (Annual and 5 Year Test Notification). The 48 hours is standard practice rather than a figure written in the regulation, so follow your district office's instructions. For work orders with the 48-hour switch on, the app sets the deadline to 48 hours before the confirmed start and checks every 30 minutes.

- **24 hours before the deadline:** admins and dispatchers get one alert email (and a text, if they opted in to SMS). They get one more, marked URGENT, when 4 hours are left.
- **Past the deadline:** the notice becomes **Overdue**, the work order is put on **Held**, and admins and dispatchers get an escalation.

To clear it: generate the notice (**Documents** → **48-Hr Notice**, or **Generate 48-Hr Notice** on the job), send it, then click **Mark Notice as Sent** on the work order. If the work order was already put on **Held** because the notice was late, marking it sent lifts the hold automatically and the work order goes back to Assigned.

Generate Cal/OSHA forms

1. **Documents** lists parsed notices under **Select a Preliminary Order to Generate Documents**, with a button per form (**EU787, EU776A, EU776B, DOSH100, EU632, 48-Hr Notice**). A greyed-out button means that blank form isn't uploaded yet (admin: section 8).
2. Review the pre-filled fields, change anything under **Additional Field Overrides**, choose **Flatten form fields** for a final copy, and click **Generate … — Official Cal/OSHA Form**.
3. Click **Download … PDF** and save it in your job files.

What fills in automatically: property, State No. and owner from the notice; the assigned technician's CCCM number; your company's CQCC number; your company name, address, phone and email. The 48-hour

notice PDF is also saved to the **Document Vault** (bottom of Documents); the other forms are download-only, so keep your copy.

> Notices disappear from the generate list once someone clicks **Mark Reviewed**; generate forms before that, or use the job page's **Generate EU-787 / DOSH-100 / EU-632** buttons.

SECTION 6

Technician Guide

Technicians see **My Work** and **My Account**. Everything works on a phone browser or the Elev8 Comply phone app.

Your work

- When a work order is dispatched to you, you get an email **Dispatch: date — property** with the full packet. If you opted in to SMS (**My Account → SMS Notifications**), you also get a text when a job is assigned and when it's dispatched.
- **My Work** lists **Active Work Orders** and **Recently Completed**. Tap one to see the dispatch packet: property, address, scheduled time, access notes, required work and the dispatcher's notes.

Update the status as you go

1. **Mark Ready** — you have what you need and are ready to go.
2. **En Route** — on your way.
3. **On Site** — arrived at the building.
4. **Complete Job** — type your completion notes (what was done, anything left open), then **Confirm Completion**.

The office sees each update right away.

> If a work order shows **Held**, don't start the work — the 48-hour notice wasn't sent in time. Call the dispatcher.

Your license numbers

My Account → License Numbers: enter your **CCCM License #** and, only if you're QEI certified, your **QEI Number**, then **Save License Numbers**. Your CCCM number prints on the Cal/OSHA forms for your jobs, so keep it exact.

SECTION 7

Client Portal Guide

Clients see **Overview, My Jobs, Upload Notice, Profile**. You only ever see your own company's jobs.

The first time you open the portal, a box asks whether you want SMS updates. Choose either; you can change it later under **Profile**.

Overview and My Jobs

The overview counts **Active Jobs, Awaiting Approval, Pending Schedule** and **Completed**, and lists your jobs. **Review Now** jumps to proposals waiting for you. Open a job to see its stage, its proposal, the scheduling status and recent updates.

Send us a new Cal/OSHA notice

1. **Upload Notice.**
2. Choose the **Property** and attach the notice PDF.
3. Click **Submit Notice**. We read it automatically and you'll get a proposal by email.

The notes box on this page is not saved yet — call the office with anything we need to know.

Review a proposal

You'll get an email **Proposal Ready for Review** with a button to the proposal. It shows the letter, the **Pricing Breakdown**, the total, and when it was sent and expires.

- **Approve Proposal** — accepts it. You'll get a **Proposal Approved** email and go straight to scheduling.
- **Request Changes** — type what should change (at least a sentence) and click **Send Request**. You'll get a revised proposal by email.
- **Decline** → **Confirm Decline** — turns it down. We'll be in touch.

Pick a work date

1. After approving, click **Schedule Your Job** → (or **Request Scheduling** on the job).
2. Enter up to three preferred dates and any notes (access, contacts, building rules).
3. Click **Submit Scheduling Request**.

You'll get **Work Date Confirmed** once we lock in a date. To change it, call the number in that email — please don't reply to it.

Your profile

Profile lets you change your name, phone, sign-in email (confirmed by email) and password, and turn SMS on or off. See section 2.

SECTION 8

Settings & Administration

Only admins see **Settings** in the menu. Everything about people — adding, editing, deactivating — happens under **Settings** → **All Users**. Nobody is ever deleted, so past jobs and signed forms always keep the right name.

Add a user

1. **Settings** → **All Users** → **Add User.**
2. Fill in **Full Name**, **Email**, **Role** and (optional) **Phone**. Role **Client** also needs a **Company Account** (the property-management company they belong to). Role **Technician** shows **CCCM License #** and **QEI Number**; both are optional, and the technician can add them later from My Account.
3. Click **Add User & Send Invite**. They get an invite email and set their own password.

If the page says "User added, but the invitation email failed", open the user and click **Resend invite**.

Role	What they can open
Admin	Everything, including Settings and user management
Reviewer	Dashboard, Notices, Jobs
Dispatcher	Notices, Jobs, Dispatch, Work Orders, Documents
Technician	My Work (their assigned work orders)
Client	Client portal only: their company's jobs, proposals and notices

Every staff role also has **My Account**; clients have **Profile**.

Edit a user

1. **Settings** → **All Users**, then click the person's name or **Edit**.
2. Change any of: name, sign-in email, role, phone, company account (clients), CCCM / QEI (technicians).
3. Click **Save Changes**. The change applies everywhere at once — sign-in, user list and technician record.

Things to know:

- Changing someone's **email** here takes effect immediately, with no confirmation email. They sign in with the new address and the same password.
- Changing a technician to another role takes them off dispatch; their past work orders keep their name.
- You cannot change your own role, so there is always at least one admin.

Deactivate or reactivate a user

- On the user's page, **Access** → **Deactivate user** → **Deactivate**. They are signed out, cannot sign in, and see "This account has been deactivated" if they try. Technicians drop off dispatch.
- **Reactivate user** restores access with the same password.
- You cannot deactivate yourself.

Resend an invite

On the user's page, **Access** → **Resend invite** emails a fresh "set your password" link. Use it when an invite expired, went to spam, or someone is locked out.

Technician licenses

Settings → **Technician Licenses** lists every technician with two cards, **CCCM License Numbers** and **QEI Numbers**.

- Click **Add** (empty) or **Edit** (has a number) on a row, type the number, and press Enter or the check mark.
- **Add Technician** (top right) opens Add User with the Technician role already chosen.
- Dispatchers can open this page and edit numbers too, but only admins can add people.

Number	What it is	Where it prints
CCCM	California Certified Competent Conveyance Mechanic license, issued by the state to the mechanic	Cal/OSHA forms such as EU-632
QEI	Qualified Elevator Inspector certification (ASME QEI-1), issued by accredited bodies such as NAESA International — only for certified inspectors	Kept on the technician's record for reference; California's elevator forms don't ask for it

Cal/OSHA form templates

Settings → **Official Cal/OSHA Form Templates** → **Manage Form Templates** holds the blank official PDFs the app fills in. The app fills the real state forms, not look-alikes.

- Each form has **Download from Cal/OSHA (dir.ca.gov)** to get the official blank, then **Upload Official Form**.
- When the state publishes a new version, download it and click **Replace with New Version**.
- The banner shows how many of the 11 forms are uploaded; generating a form whose template is missing won't work.

Company details on forms

Company name, address, phone and email on the forms, and the company CQCC license number (48-hour notice and the forms' CQCC fields), come from the hosting settings (see Behind the Scenes), not from a page in the app.

> **The CQCC license is currently a placeholder (12345)** — replace it with the real number as soon as you have it.

SECTION 9

Emails & Text Messages

Every email comes from **Elev8 Comply <no-reply@elev8comply.com>** and has a button to the exact page it's about. Replies go nowhere, and every email footer says so. Every email and text is logged (see section 11).

Emails

Email (subject)	Sent to	When	Button opens
You're invited to Elev8 Comply	New user	Admin adds them	Set-password page
Set your Elev8 Comply password	User	Admin clicks Resend invite	Set-password page
Reset your Elev8 Comply password	User	They use Forgot password	Set-password page
Confirm your new Elev8 Comply email address	The new address	User changes their sign-in email	Confirm page
Your Elev8 Comply sign-in email change was requested	The old address	Same	(warning only)
[URGENCY] AI Proposal Ready — property	Assigned reviewer (admin if critical)	A notice is parsed	Proposal draft
Proposal Ready for Review — job	Client company email	Staff click Send to Client	Client's proposal page
Proposal Approved — job	Client	Client approves	Client's job page
Revision Requested	Admins, dispatchers, reviewer	Client requests changes	Proposal
Proposal Declined	Staff	Client declines	Proposal
New Scheduling Request	Admins, dispatchers	Client submits dates	Scheduling page
Work Date Confirmed — job	Client	Dispatcher confirms a date	Client's job page; includes the office phone
Dispatch: date — property	Technician	Dispatcher dispatches	Technician's work order
48-hour notice alert / overdue escalation	Admins, dispatchers	48-hour deadline within 24 hours, or missed	Work order

Text messages (SMS)

Text	Sent to	When
Work order assigned	Technician	Dispatcher clicks Assign
Work order dispatched	Technician	Dispatcher clicks Dispatch to Technician
48-hour notice due soon (URGENT at 4 hours)	Admins, dispatchers who opted in	Once at 24 hours before the deadline, once more at 4 hours
48-hour notice overdue	Admins, dispatchers	Deadline missed

Clients currently receive emails only, no texts. Texts go only to people who opted in to SMS, at the number they opted in with. Anyone can reply **STOP** to a text to stop all texts from our number.

SECTION 10

Troubleshooting

Find the symptom, try the fix in the first table, and if it's still broken pass it to your admin with the time it happened — that's what they need to find it in the logs.

Anyone can fix

Symptom	Likely cause	Fix
"Incorrect email or password"	Typo, or the email was changed	Check the address; use **Forgot password?**
"This account has been deactivated"	An admin deactivated you	Ask an admin to reactivate you
"That link has expired or was already used"	Invite / reset links work once; email scanners can use them up	Use **Forgot password?**, or ask an admin to **Resend invite**
No invite or reset email	Spam folder, typo in your address, or sent within the last minute	Check spam, wait 1–2 minutes, try again; ask an admin to check your email on your user page
Email change didn't happen	You must click the link sent to the **new** address, within 24 hours	Request it again from My Account / Profile
"Link no longer valid" on the email-confirm page	Link used, expired, or your email changed since	Request a new confirmation link
Page opens but you're bounced to another page	That page isn't part of your role	Ask an admin if your role is right
A form button is greyed out	That blank Cal/OSHA form hasn't been uploaded	Ask an admin (Settings → Form Templates)
"Application error" or a blank page	A temporary server problem	Reload after a minute; if it persists, tell an admin the time and page
Work order shows **Held**	The 48-hour notice deadline was missed	Don't start work; call the dispatcher

Admin / technical

Symptom	Where to look	Fix
Nobody is receiving emails	Vercel Logs (`[Email] Resend rejected message`); Resend → Domains	elev8comply.com must show **Verified** in Resend; `RESEND_FROM_EMAIL` must be an @elev8comply.com address; the 4 DNS records (section 11) must exist

Symptom	Where to look	Fix
Email buttons go to a broken site	`NEXT_PUBLIC_APP_URL`	Must be exactly `https://www.elev8comply.com`; fix it and **Redeploy**
One person isn't getting emails	Resend → Emails (bounced / suppressed?)	Fix their address on their user page; Resend may need the address removed from its suppression list
Many pages show "Application error" at once	Vercel Logs: `max clients reached` / `EMAXCONNSESSION`	Database connections ran out; the app uses Supabase's transaction pooler to prevent this. If it returns, check `DATABASE_URL` points at the Supabase pooler and redeploy
Notice stuck on **Parse Failed**	Notice page shows the error; OpenAI → Usage / billing	Out of OpenAI credit, or a scanned image without text; add credit or enter details manually, then **Re-Parse** once
Proposal email went to the wrong person	Properties → the account's email	Proposals go to the account's email; correct it and send again
Forms print the wrong company details or CQCC	Vercel → Environment Variables (`COMPANY_*`)	Correct the value and **Redeploy**
A work order is stuck on **Held**	The work order page	Late 48-hour notice: send it and click **Mark Notice as Sent** (the hold lifts). Any other hold: click **Release Hold**
Texts not arriving	Twilio console → Messaging logs	The person must be opted in (My Account → SMS Notifications) with the right number; check A2P registration
A bad release broke the site	Vercel → Deployments	Promote the last good deployment to Production
Someone left the company	Settings → their user	**Deactivate user** (never share or reuse their login)

Known limitations (current version)

These are gaps in the software today, so nobody wastes time looking for a button that isn't there:

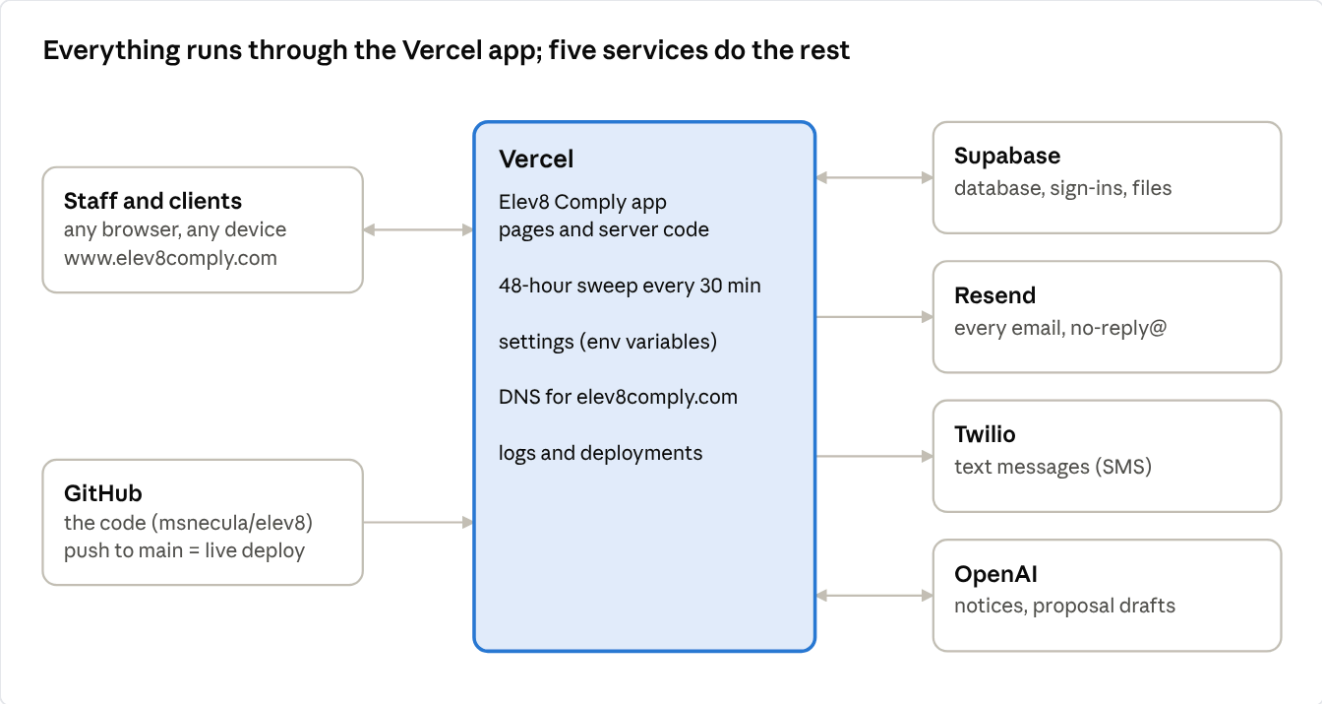

- Notices forwarded by email land under an "unmatched" account and can't be reassigned from the screen.
- **Re-Parse** creates a duplicate job and draft each time.
- Job stages stop at **Dispatched**: completing a work order doesn't mark the job Completed, and there is no manual stage change or internal-notes box.
- Expired proposals can still be approved; nothing marks them Expired.
- No reschedule button for a confirmed date and no cancel button for a work order.
- Technician skills, regions and availability can't be edited, so **Find Technicians** matching is rough.

- Times entered before October 14, 2026 were saved 7–8 hours early (a server time-zone bug, now fixed); re-enter any of those still in use.
- Generated Cal/OSHA forms (except the 48-hour notice) aren't saved to the Document Vault — keep your downloads.
- The client's notes on **Upload Notice** aren't saved.
- Deleting a property isn't blocked when it has notices or jobs.

SECTION 11

Behind the Scenes

Elev8 Comply is a web app hosted on Vercel, with its data, sign-ins and files in Supabase. Five outside services do the rest. You need an account on each to fix problems there; nothing in this section is done from inside the app.

The app on Vercel and the services it uses

If the site itself is down, start at Vercel; if one kind of message or data is wrong, go straight to that service.

The services

Service	What it does for Elev8	Where to look
Vercel (project elev8)	Hosts the website, runs the server code, builds every new version, runs the 48-hour sweep every 30 minutes, hosts the DNS for elev8comply.com	vercel.com → elev8 → Deployments, Logs, Settings → Environment Variables; Domains for DNS
Supabase	Database (all jobs, notices, users…), sign-in accounts, file storage (uploaded notices, form templates, generated documents)	supabase.com → project → Table Editor, Authentication → Users, Storage, Logs
Resend	Sends every email from no-reply@elev8comply.com (invites, password resets, proposals, alerts)	resend.com → Emails (delivery status, bounces), Domains (elev8comply.com must stay Verified)

Service	What it does for Elev8	Where to look
Twilio	Sends SMS (technician assign/dispatch texts, 48-hour alerts) to people who opted in	twilio.com console → Messaging logs; A2P 10DLC registration
OpenAI	Reads uploaded Cal/OSHA notices and drafts proposals	platform.openai.com → Usage, API keys, billing
GitHub (msnecula/elev8)	Holds the code. Every push to the `main` branch deploys to the live site automatically	github.com/msnecula/elev8

How a change goes live

1. Code is pushed to the `main` branch on GitHub.
2. Vercel builds it (about 1 minute) and switches www.elev8comply.com to the new version only if the build succeeds. A failed build leaves the previous version running.
3. Any other branch gets its own **Preview** deployment (login-protected) for testing first.
4. To undo a bad release: Vercel → Deployments → pick the last good one → **Promote to Production**.

> Changing a setting (environment variable) in Vercel does **not** affect the running site until the next deployment. Use **Redeploy** on the latest deployment after changing one.

Settings (Vercel → elev8 → Settings → Environment Variables)

Setting	What it controls	Notes
`NEXT_PUBLIC_APP_URL`	The site address used in every email link	Must be exactly `https://www.elev8comply.com`. A typo here breaks every link in every email.
`NEXT_PUBLIC_APP_NAME`	App name shown in the app and emails	Elev8 Comply
`COMPANY_NAME`, `_ADDRESS`, `_CITY`, `_STATE`, `_ZIP`, `_PHONE`, `_EMAIL`	Your company details printed on Cal/OSHA forms	
`COMPANY_CQCC_LICENSE`	Company CQCC license number on the 48-hour notice and the forms' CQCC fields	**Still the placeholder 12345** — update when you have the real number, then redeploy
`RESEND_FROM_EMAIL`, `RESEND_FROM_NAME`	Sender of all emails	no-reply@elev8comply.com, Elev8 Comply
`RESEND_API_KEY`	Lets the app send email	Secret

Setting	What it controls	Notes
`DATABASE_URL`, `DIRECT_DATABASE_URL`	Database connection	Secret. The app automatically uses Supabase's transaction pooler (port 6543) so it doesn't run out of connections
`NEXT_PUBLIC_SUPABASE_URL`, `NEXT_PUBLIC_SUPABASE_ANON_KEY`, `SUPABASE_SERVICE_ROLE_KEY`	Supabase sign-in and storage	The service role key is secret and has full access
`TWILIO_ACCOUNT_SID`, `TWILIO_AUTH_TOKEN`, `TWILIO_FROM_NUMBER`	SMS	Auth token is secret
`OPENAI_API_KEY`	Notice reading and proposal drafting	Secret
`CRON_SECRET`	Protects the 48-hour sweep from outside callers	Secret
`EMAIL_INTAKE_WEBHOOK_SECRET`	Protects the email-intake endpoint for notices sent by email	Secret

Never paste a Secret value into email, chat or documents. If one leaks, create a new key at the service, update it in Vercel, and redeploy.

Email domain (DNS)

elev8comply.com's DNS is managed in Vercel (Domains → elev8comply.com). Four records let Resend send as elev8comply.com — don't delete them:

Name	Type	Purpose
`resend._domainkey`	TXT	DKIM signature (proves emails really come from you)
`send`	CNAME	Sending / SPF
`rsend`	CNAME	Sending / SPF
`_dmarc`	TXT	DMARC policy (`p=none` , monitoring only)

elev8comply.com has no inbox, so mail sent *to* an @elev8comply.com address bounces. Supabase's own email (custom SMTP through Resend) is set up as a backup, but the app sends invites and password resets itself through Resend.

Logs: where to look when something fails

- **Vercel** → **elev8** → **Logs**: errors from the app. Failed emails show as `[Email] Resend rejected message`; database overload shows as `EMAXCONNSESSION` or `max clients reached`. Logs are kept for a limited time, so check soon after a problem.
- **Resend** → **Emails**: whether each email was delivered, bounced or marked spam.
- **Supabase** → **Table Editor** → **notifications**: every email and text the app tried to send, with status `sent` or `failed` and the error. Sign-in links are deliberately not stored there.
- **Supabase** → **Authentication** → **Users**: sign-in accounts; a deactivated user shows as banned.

Phone apps

The iPhone/iPad and Android apps (app name **Elev8 Comply**, ID `com.elev8comply.app`) are a thin shell around www.elev8comply.com, kept in the `mobile/` folder of the code. Website changes reach the apps instantly; the apps only need rebuilding to change the icon, name or version. Step-by-step build and store instructions are in `mobile/README.md`.

Test accounts

The live database holds test logins (admin, reviewer, dispatcher, technician, client) used for checking the site. Keep their passwords out of this manual and remove or deactivate them before real customers go live.
